Wind Direction(Degree)	77	83	108	139	256
Cloud Cover(Octa)	4	3	5	4	5
Warning	No Warning	No Warning	No Warning	No Warning	No Warning

Forecast Summary:

According to the weather forecast received from the Indian Meteorological Department, due to light to moderate cloud cover in the next five day there is a possibility of light rain with thunderstorms & lightning at local level between dated on 05-06 September, 2025. The maximum temperature is between 33.0- 34.0°C, which is likely to be below normal and the minimum temperature is between 27.0-27.0°C, which is likely to be 1-2°C higher normal. The maximum and minimum range of relative humidity is between 87-89 and 56-67%. Wind direction is south-east, south-west and wind speed is between 4.0-15.0 km/h with winds expected to be 5-6 Km/h normal.

Weather Warnings (Valid Till 08:30 IST of the next day)

According to the weather forecast received from the Indian Meteorological Department, there is a warning of light rain with high winds, thunderstorms and lightning between dated on 05 to 06 September 2025.

Likely impacts of weather warnings on Agriculture and associated Agromet advisories

In view of the possibility of light rain in the coming week, farmers are advised to postpone irrigation work in standing Kharif crops and in case of clear sky, spray pesticides and insecticides and do weeding. Do not allow waterlogging in maize, pulses and oilseed crops, drain out the excess rain water from the field due to last week. Do not tie animals in open places nor leave them outside for grazing and do not allow animals to go to waterlogged areas.

General Advisory:

Postpone irrigation work in standing crops. Prevent animals from going to flowing water / waterlogged areas. Do not let animals drink stagnant rainwater. During the rainy season, the possibility of lice infestation in animals increases. To prevent this, spray lime in the animal shed so that the eggs and larvae of lice are destroyed. During rainy season, take a torch while going out of the house at night and to avoid snakes, scorpions etc., close the walls and holes of the house and spray a little kerosene or phenyl, the smell of which drives the snakes away.

SMS Advisory:

Suspend irrigation work in standing crops. Do not tie animals in open spaces nor leave them outside to graze and do not allow animals to go to waterlogged areas.

Crop Specific Advisory:

Crop (Stage)	Crop Specific Advisory
RICE (Booting)	The paddy crop is in the stage of emergence of ears (Gobh stage) and flowering, which is sensitive to lack of moisture. Hence, in case of no rain, maintain appropriate moisture by doing light irrigation as per requirement. If infestation of stem borer insect is seen in the paddy crop, then for its control, spray Imidacloprid 17.8 EC SL at the rate of 250 gram/hectare by dissolving it in 500-600 litres of water in clear weather. If infestation of brown hopper insect is seen in the paddy crop, drain out the water accumulated in the field. Or make a solution of Neem oil at the rate of 1.5 litre/hectare in 500-600 litres of water and spray it in clear weather.
MAIZE (Milking)	Maize is going on silking/Milking stage, which is sensitive to the lack of moisture, so in case of lack of rain, maintain proper moisture by doing light irrigation as per requirement. In maize crop, there is a possibility of outbreak of stem borer / shoot fly pest, so for its prevention, Emamectin Benzoate 5% Sg 200 g / ha at 500-600 liters of water solution Sprinkle on clean weather.
SESAME (GINGELLY/TIL) (Pod initiation)	There is a possibility of showing an outbreak of leaf and pod larva pest in sesame crop, so for its prevention, use Oxydimethane-methyl 50% EC. Spray the solution in 500-600 liters of water at the rate of 1.0 liter/ha in clear weather.
GROUNDNUT (Pod formation)	During the formation of pegs in groundnut crops and during the formation of beans, in the event of no rain, maintain sufficient moisture in the fields by doing light irrigation. Groundnut crop is likely to show white gidar / termite pest infestation, hence fipronil 0.3% GR at the rate of 20 kg / ha topdressing of clear sky.
BLACK GRAM (Vegetative)	There is a possibility of an outbreak of yellow mosaic disease in the crop of black gram/green gram, so for its prevention, dimethoate 30 EC is used. 1.0 liter/ha or Oxidemetan-Methyl 25 EC. Spray the solution in 500-600 liters of water at the rate of 1.0 liter/ha in clear weather.
RAPESEED (Sowing)	For sowing any one of the recommended varieties of rapeseed - Ta-36, Ta-9 Bhavani, PT-303, PT-30 etc., arrangement of fertilizer and seeds at the rate of 3-4 kg seeds/hectare. Do the sowing work in the absence of rain.
SUGARCANE (Vegetative)	If the length of sugarcane has become five feet, then do the first tying at a height of two and half feet. For the first tying, tie two bunches of sugarcane in a line together with the dry leaves below. Destroy the plants affected by red rot disease by removing them along with the roots and spray the plants with a solution of thiophanate methyl 0.2 percent.

Horticulture Specific Advisory:

Horticulture (Stage)	Horticulture Specific Advisory
TOMATO (Transplanting)	Transplanting of saplings planted in kharif crops like brinjal, chilli, tomato and early cauliflower. If there is a possibility of water stagnation in the field, then plant the early cauliflower, brinjal, tomato, chilli etc. on the ridges. If there is an outbreak of fruit borer / leaf borer in vegetable crops, make a solution of neem oil in 1.5 ml / liter of water to control it and spray it 3-4 times after clearing the sky at intervals of 6-10 days.
MANGO (Transplanting)	Plant new plants in pits already filled with mango, guava, amla, lemon etc. Plant new plants in place of the destroyed plants in the new bag. Make a stand of 25-30 meters high soil around the stem by folding banana / papaya bags. For prevention of mango leaf moth, apply 2% carbaryl 1.5% dust on the clear sky.

Live Stock Specific Advisory:

Live Stock	Live Stock Specific Advisory
BUFFALO	Farmers are advised to During the rainy season, the possibility of lice infestation in animals increases. To prevent this, spray lime in the animal shed so that the eggs and larvae of lice are destroyed. Do not tie animals in open spaces/under trees during rains. Tie animals in the open only when the sky is clear at night. Tie animals in a shady place during the day. Do not feed the stagnant water of the ponds or other places, due to which the animals are prone to liver flu and stomach worms. The best time to give antithetical drugs for the prevention of insects in the stomach of animals. Give sufficient amount of grains to animals along with green and dry fodder. Make sure to give clean and fresh water to animals 3-4 times a day. Do not tie pregnant animals at a sloping place. This is the right time to give deworming medicine to animals to prevent stomach worms.

Poultry Specific Advisory:

Poultry	Poultry Specific Advisory
HEN	Farmers are advised to Clean every day at the place where the chickens live. Arrange for clean water and balanced diet to the hens. This is not the right time to raise new chicks for eggs but it is a suitable time for broiler chickens. Add supplementary food, vitamins and energy food material to the chickens' diet and also give calcium material to the chickens. Chlorination of water must be done. Give deworming medicine to kill the worms in the stomach of the chickens. Keep the chicken house dry and keep turning the bedding. If there is excess moisture in the chicken house, turn on the fan.

Likely impacts of weather warnings (General)

According to the weather forecast received from the Indian Meteorological Department, there is a warning of light rain with high winds, thunderstorms and lightning between dated on 05 to 09 September 2025.

Impact based advisories (General)

In view of the possibility of light rain in the coming week, farmers are advised to postpone irrigation work in standing Kharif crops and in case of clear sky, spray pesticides and insecticides and do weeding. Do not allow waterlogging in maize, pulses and oilseed crops, drain out the excess rain water from the field due to last week. Do not tie animals in open places nor leave them outside for grazing and do not allow animals to go to waterlogged areas.

Farmers are advised to download Unified “Mausam” and "Meghdoot" android application on mobile for Weather forecast and weather based Agromet Advisories and "Damini" android application for forecast of Thunderstorm and lightening.
