Likely impacts of weather warnings on Agriculture and associated Agromet advisories

Farmers are informed that in view of the possibility of rain, irrigation work in standing Rabi crops should be postponed and the grains should be preserved by harvesting and threshing the mature crops.

Farmers are informed that in view of the possibility of rain, irrigation work in standing Rabi crops should be postponed and the grains should be preserved by harvesting and threshing the mature crops.

General Advisory:

Farmers are advised to irrigate standing Rabi crops only when the wind is calm; otherwise, there is a higher risk of the crops lodging (falling over). For sowing Zaid maize, urad (black gram), and summer vegetables, arrange for fertilizers and seeds and sow when the soil moisture is adequate. When using pesticides, fungicides, and herbicides, use separate equipment or thoroughly wash the equipment with clean water before each application. Do not spray or dust pesticides, fungicides, or herbicides while standing against the wind. If possible, spray in the evening. After spraying, wash your hands thoroughly with soap or handwash before eating or drinking, and wash your clothes and take a bath.

After spraying, wash your hands thoroughly with soap or handwash before eating or drinking, and wash your clothes and take a bath.

SMS Advisory:

Irrigate standing crops as per requirement and the weather is favorable for harvesting, threshing of mature crops and sowing of summer crops.

Irrigate standing crops as per requirement and the weather is favorable for harvesting, threshing of mature crops and sowing of summer crops.

Crop Specific Advisory:

Crop (Stage)	Crop Specific Advisory
WHEAT (Flowering)	Farmers are advised to do fourth irrigation in wheat crop after 80-85 days (before earing). Use fodder made of zinc phosphide or aluminum phosphide cake when rats are found in the wheat crop. Make collective efforts for the prevention of rats.
MUSTARD (Grain filling and Maturity)	Harvest the crop when the mustard pods become 75% golden in color. After harvesting the mustard crop, dry the crop and separate the seeds after threshing. Mustard crop is likely to show outbreak of aphid in mustard crop, so Chlorpyriphos rate of 20% EC 1.0 liter / ha or Monocrotophos 37% SL @ 500 ml / ha for its prevention spray from 500 - 600 liters of water.
FIELD PEA (Pod Development)	There is a possibility of outbreaks of Pod borer insects in the pea crop, so for its prevent this, spraying Qunalphos 25 EC@ 2 liters per hectare or Emamectin benzoate 5 % sg 180 - 200 gram per hectare in 500 to 600 liters of water Solution.
CHICK PEA (Pod Development)	There is a possibility of outbreaks of pod borer insects in the gram crop, so for it's prevent this, spraying Qunalphos 25 EC@ 2 liters per hectare or Emamectin benzoate 5 % sg 180 - 200 gram per hectare in 500 to 600 liters of water.
MAIZE (Sowing)	Recommended to the composite varieties of Zaid Maize - Tarun, Naveen, Mahi, Kanchan, Gaurav, Sweta, Azad Uttam and Hybrid Varieties - Prakash, Dikalb- 7074, Dikalb- 9108, Dikalb- 9208, Dikalb- 9141, Dikalb- 9165, Dikalb- 9217, PHB-8144, Deccan 115, MMH-133 etc. Sow by arranging fertilizers and seeds for sowing any one species. Sow 20-25 kg seed/hectare for composite variety of maize and 18-20 kg seed/hectare for Hybrid variety.
BLACK GRAM (Sowing)	Do to Zaid black gram is variety - Urd-Ta-9, Narendra Urd-1, Azad Urd-1, Azad Urd-2, Shekhar-2, Sujata, PU-40 etc arrange of fertilizer and seed for sowing of any one of the varieties. for sowing of black gram seeds at the rate of 25-30 kg of seed / hectare .
WHEAT (Flowering)	Farmers are advised to do fourth irrigation in wheat crop after 80-85 days (before earing). Use fodder made of zinc phosphide or aluminum phosphide cake when rats are found in the wheat crop. Make collective efforts for the prevention of rats.

Horticulture Specific Advisory:

Horticulture (Stage)	Horticulture Specific Advisory
POTATO (Physiological Maturity)	Cut the lock of the crop 15-20 days before digging the potato crop, which makes the skin of the tuber firmer and reduces the possibility of potato rot.
ONION (Vegetative)	Outbreak of purple spot disease in onion crop affects the condition at 28 - 30 ° C temperature and 80 - 90% relative humidity, so copper oxychloride 0.3% (3 g/liter water) or Mancozeb at the rate of 0.25% (0.25 g/liter of water) and spray 3-4 at a 15-20 day interval. Sown vegetables such as ladyfinger, zucchini, cucumber, bitter gourd, gourd and pumpkin etc. sown during summer season.
MANGO (Flowering)	There is a possibility of an outbreak of midge insect in mango blossom, so spraying phenytothian solution in 1.0 ml / liter water to prevent it. In mango orchards, there is a possibility of moth and mango hopper pest infestation, so spraying Chlorpyriphos 20 EC 2.0 ml or Phenitrothian 50 EC 3.0 ml / liter water is sprayed to prevent it.
